Ergonomics: why it matters

Working while occupying unnatural body positions for an extended period of time is the main reason for the development of persistent pain. Statistically speaking, neck, back and wrist are the most commonly affected body regions for office workers. In fact, there is a higher chance of you developing pain, than avoiding it. And that is only where the real problem begins.

One in every four office workers, once experiencing it, will develop life-long pain episodes. Your actions regarding neck, back and wrist are the most important predictors for the onset and the duration of your pain.

Back pain is world's biggest pain problem causing the highest numbers of permanently reduced life quality. Prolonged sitting periods directly affect your health. Relationship seems to be exponential, with lower sitting time resulting in low risks, while sitting for more than six or eight hours per day increases the risks of heart-related and premature death.

Up to

63 %

**OF OFFICE WORKERS ARE DEALING
WITH NECK PAIN**

It is quite straight-forward, you have to lower the amount of time sitting. Even short periods of standing result in positive health outcomes.

The office-pain pandemic can stop with you. Shop the perfect solutions, allowing you to seamlessly shift between sitting and standing without compromising your productivity.

Standing Desks

M2

Height	60 - 125 cm
Max. load	120 kg
Lifting speed	38 mm/s

Health shaker. Difference maker.

Supercharge yourself through the day and take your productivity on the next level. With two reliable motors the Model Two delivers a height change of 65 centimetres in the matter of seconds. Combined with the stunning Riser, Alcantara Desk Mat and all the accessories you need, it will help you shake up your office routine and feel the difference.

M2 Round

Height	64 - 129 cm
Max. load	120 kg
